Drilling begins at Bynoe

Highlights

- **Drilling underway at Kingston’s Bynoe Project**
- **Drilling approvals in place for Cai, Lei, Bao, Liana and Min prospects**

Kingston Resources (ASX:KSN) is pleased to announce that it has commenced drilling at the Bynoe Project, southwest of Darwin in the Northern Territory. The initial program of up to 4,000m of RC drilling is expected to take up to four weeks, with results expected within two to three weeks of completion.

Drilling is planned at the Cai, Lei, Bao, Liana and Min Prospects. As previously stated, these targets were identified by Kingston’s surface sampling programs and have been further refined by geophysical interpretation of aeromagnetic and radiometric data.

“After a long wet season, Kingston is thrilled to be on the ground starting our initial drill program at Bynoe”, commented Kingston’s Managing Director Andrew Corbett. “This is an important milestone for the project and we are looking forward to reporting results as they come through”.

In conjunction with this initial drilling program, Kingston also intends to recommence surface geochemical surveys to follow up on anomalies identified in last year’s programs, and to test areas of interest identified from the recent airborne geophysical survey.

About Kingston Resources

Kingston Resources is a metals exploration company. The company holds an attractive portfolio of lithium exploration tenements covering four key project areas. In Western Australia, the Mt Cattlin and Greenbushes projects are adjacent or near existing lithium mines. In the Northern Territory, the Bynoe project area is home to some exciting new discoveries and the Arunta project lies within a significant pegmatite field. In addition, the Livingstone Gold Project holds a 50koz inferred resource and is the site of a number of high grade historic intersections. The company is well funded to rapidly advance its lithium exploration projects, alongside work on the Livingstone Gold Project.

Competent Persons Statement

The information in this report that relates to Exploration Results, Mineral Resources or Reserves is based on information compiled by Mr Andrew Paterson, who is a member of the Australian Institute of Geoscientists. Mr Paterson is a full-time employee of the Company and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity he is undertaking to qualify as a competent person as defined in the 2012 Edition of the “Australasian Code for reporting of Exploration Results, Mineral Resources and Ore Reserves” (JORC Code). Mr Paterson consents to the inclusion in this report of the matters based upon the information in the form and context in which it appear.
